

PocketLedger

Thrift, Loan & Business Ledger — User Guide

1. Getting Started

When you open PocketLedger you'll land on the welcome screen. Tap **Start** to continue to the login screen. From there you can either explore the app with the built-in demo account, or create your own account to start entering your real data.

2. The Demo Account (View Only)

The login screen shows a demo login you can use to explore PocketLedger with sample thrift plans, loans, clients, invoices and expenses already filled in. The demo account is **view only** — you can browse every screen, but nothing you do while signed in as the demo account is saved, and no new records can be added, edited or deleted. This keeps the sample data intact for anyone else who wants to try the app.

3. Creating Your Own Account

To start entering and saving your own data, switch to the **Sign up** tab and fill in your name, email and password. You'll also be asked for an **access key** — this is provided by your developer/administrator. Entering the correct key does two things:

- It creates your own private, fully editable account.
- It permanently clears the sample demo data on this device, giving you a clean, empty ledger to fill with your own records.

If you don't have an access key, tap **Need an access key? Contact developer** on the sign-up screen for contact details.

4. What You Can Do Once Signed In

- **Thrift** — run daily, weekly, monthly, rotating (cycle) and target savings plans, and track every member's contributions.
- **Loan Tracking** — record money you've lent out or borrowed, with interest, due dates and repayment history.
- **Payment Portal** — bill clients with invoices, collect payments and issue receipts, shareable to WhatsApp.
- **Expenses & Budgeting** — log expenses by category and set monthly budgets.

5. Backing Up Your Data

Your data is saved automatically to this device only. From **Settings** you can export a backup file at any time, and import it again later or on another device. Settings is also where you update your login email and password, business details, and app theme.

6. Need Help?

If you run into any issues, or need an access key to create a new account, use the **Contact developer** link on the sign-up screen for the current contact details.
